

Green Technology - Answers Only

- 1) Reduce
- 2) Environmental Technology
- 3) Energy efficiency
- 4) Pollution
- 5) Solar
- 6) LED
- 7) Plastic
- 8) Noise pollution
- 9) Abundant but location-dependent
- 10) Wind energy
- 11) Energy
- 12) Hydropower
- 13) Reduce, Reuse, Recycle
- 14) Renewable biological resources
- 15) Bamboo
- 16) China
- 17) Solar
- 18) Recycling
- 19) Carbon
- 20) Eco-friendly
- 21) Wind
- 22) Five
- 23) Tidal
- 24) Recycled
- 25) Cork
- 26) Circular
- 27) Petrol
- 28) Clean
- 29) Green technology uses science and innovation to create eco-friendly solutions.
- 30) Carbon dioxide (CO₂).
- 31) Minimizes environmental damage and promotes sustainability.
- 32) Solar panels, wind turbines, electric vehicles, LED lighting, recycling systems.
- 33) Reduces pollution, lowers greenhouse gases, conserves resources.
- 34) Safe disposal and recycling of electronic waste.
- 35) Using resources responsibly to support future generations.
- 36) Covers production, usage, maintenance, and disposal stages of devices.

- 37) Applying green methods for electronic waste management.
- 38) Uses renewable energy like solar and wind, reducing fossil fuel use.
- 39) Biodegradable products decompose naturally and reduce pollution.
- 40) Virtualization reduces physical server needs and saves energy.
- 41) Energy from Earth's internal heat.
- 42) Regulations for eco-friendly IT practices.
- 43) Data centres using energy-efficient technologies.
- 44) Reduce pollution, conserve energy, promote sustainability.
- 45) Reduces greenhouse gases and supports clean energy.
- 46) Electric vehicles reduce fossil fuel usage and air pollution.
- 47) Governments create policies and incentives for green practices.
- 48) Smart grid uses digital tech to optimize energy distribution.
